安装

```
wget https://www.percona.com/downloads/XtraBackup/Percona-XtraBackup-
2.4.9/binary/tarball/percona-xtrabackup-2.4.9-Linux-x86_64.tar.gz
tar xf percona-xtrabackup-2.4.9-Linux-x86_64.tar.gz
cp percona-xtrabackup-2.4.9-Linux-x86_64/bin/* /usr/bin/
```

问题：

innobackupex: /usr/lib64/libstdc++.so.6:   version   `GLIBCXX_3.4.15'   not   found   (required   by innobackupex)

```
strings /usr/lib64/libstdc++.so.6 | grep GLIBCXX
```

GLIBCXX_3.4

GLIBCXX_3.4.1

GLIBCXX_3.4.2

GLIBCXX_3.4.3

GLIBCXX_3.4.4

GLIBCXX_3.4.5

GLIBCXX_3.4.6

GLIBCXX_3.4.7

GLIBCXX_3.4.8

GLIBCXX_3.4.9

GLIBCXX_3.4.10

GLIBCXX_3.4.11

GLIBCXX_3.4.12

GLIBCXX_3.4.13

GLIBCXX_FORCE_NEW

GLIBCXX_DEBUG_MESSAGE_LENGTH

发现的确没有GLIBCXX_3.4.15

那么需要下载相关文件并替代

```
wget http://ftp.de.debian.org/debian/pool/main/g/gcc-4.8/libstdc++6-4.8-
dbg_4.8.4-1_amd64.deb
```

```
ar -x libstdc++6-4.8-dbg_4.8.4-1_amd64.deb
tar xvf data.tar.xz
```

```
cd //usr/local/src/usr/lib/x86_64-linux-gnu/debug && cp libstdc++.so.6.0.19
/usr/lib64/
cd /usr/lib64/ && rm -f libstdc++.so.6
ln -s libstdc++.so.6.0.19 libstdc++.so.6
```

再次查看解决

```
strings /usr/lib64/libstdc++.so.6 | grep GLIBCXX
```

URL:

depress解压缺少工具qpress解压办法。

```
wget http://www.quicklz.com/qpress-11-linux-x64.tar
tar xvf qpress-11-linux-x64.tar
cp qpress /usr/bin
```

解决 *"/lib64/libc.so.6: version `GLIBC_2.18' not found (required by /lib64/libstdc++.so.6)"*

```
curl -O http://ftp.gnu.org/gnu/glibc/glibc-2.18.tar.gz
tar zxf glibc-2.18.tar.gz && cd glibc-2.18/
mkdir build && cd build/
../configure --prefix=/usr
make -j4
make install
```
